

GAMZE AYDIN

Computer Engineering Student

PROFESSIONAL SUMMARY

Fourth-year Computer Engineering student at Ankara Medipol University with hands-on experience in building scalable backend services, full-stack applications, and system integrations using **C#, Java, React, Node.js**, and **PHP**. Proficient in designing **RESTful APIs**, optimizing relational databases, and containerizing environments with **Docker**. A proactive team player and fast learner seeking a long-term internship or engineering role to contribute to production-grade software solutions.

EXPERIENCE

Jotform - Backend Developer Intern

August 2026 - September 2026

- Built 8 RESTful API endpoints for the Payment Analytics Dashboard to deliver real-time KPIs (revenue, timeseries, conversion).
- Mitigated server timeouts and memory crashes via generator-based batch processing (500-item chunks) and in-memory set intersections.
- Developed a streaming CSV export engine featuring UTF-8 BOM encoding and formula-injection security

Agartha Technology – Fullstack Developer Intern

April 2026 - June 2026

- Analyzed enterprise ERP system architectures and business logic workflows end-to-end to trace operational data pipelines.
- Extracted and aggregated aircraft fleet records from the database using optimized SQL queries to feed visual analytics dashboards.
- Refined frontend UI components and integrated interactive charts to display real-time fleet metrics and tracking data.

Atakum Belediyesi - Fullstack Developer Intern

June 2025 - August 2025

- Developed a React-based inventory management system with stock tracking and data visualization reporting modules.
- Built and integrated RESTful APIs using Node.js, ensuring consistent data flow across municipal workflows.
- Applied modular design and agile practices, optimizing performance through mentor code reviews.

Secure Computing - Software Test Engineer Intern

March 2025 - June 2025

- Contributed to full-stack development using React and Node.js with a focus on clean state management.
- Implemented e-commerce automation scripts simulating search, cart, and checkout flows, writing unit and integration tests with Jest.
- Enhanced UI performance and code reliability through test-driven development (TDD) and iterative refactoring.

SKILLS

Languages: Turkish (Native), English (B2)

Soft Skills: Problem Solving, Analytical Thinking, Team Collaboration, Ownership & Accountability, Time Management

Frontend: React, TypeScript, JavaScript, Material UI, Tailwind CSS, HTML5, CSS3, Jetpack Compose

Backend: .NET 8, C#, PHP, Node.js, Express.js, RESTful API Design, Clean Architecture, Repository Pattern, Dependency Injection, JWT & RBAC, Batch Processing

Databases: SQL Server, PostgreSQL, MongoDB, SQLite, Room

DevOps & Deployment: Docker, Docker Compose, Linux VPS Deployment, CI-Ready Scripting

EDUCATION 2022 – 2027

Ankara Medipol University | Computer Engineering

A dedicated individual with a strong foundation in Java-based software development, specializing in data structures and full-stack web technologies acquired through rigorous academic study. Currently an active member of the MedCodes Club, she consistently demonstrates a commitment to mastering modern engineering standards and best practices through collaborative teamwork and the execution of complex, practical applications.

PROJECTS For more projects see my [Website](#) / [Github](#)

Katana MRP – Luca Koza ERP Integration Platform

Full-Stack Enterprise Integration & Real-Time Synchronization System

- Engineered a bidirectional ERP synchronization engine automating product, stock, sales, invoice, and accounting exchange between Katana MRP and Luca Koza, eliminating manual entry and operational errors.
- Designed a structured order workflow (create → approve → invoice → sync) with JWT-secured role-based access control (Admin / Manager / Staff) ensuring controlled financial and operational processes.
- Implemented a real-time event-driven architecture using SignalR for instant notifications, with Hangfire & Quartz.NET background jobs and Polly resilience strategies for fault-tolerant API communication.
- Built a clean architecture .NET 8 backend (45+ RESTful APIs) and a React 19 + TypeScript SPA, featuring dynamic dashboards, MUI DataGrids, and Excel export, containerized with Docker.
- Developed a data integrity & deduplication engine featuring SKU validation, variant grouping, BOM synchronization, stock tracking, structured logging, audit trails, and automated deployment scripts.

Merchant Payment Analytics & Reporting Engine

High-Throughput Analytics & Data Export Platform (PHP, SQL, REST APIs, Docker)

- Built 8 RESTful endpoints for a payment dashboard tracking real-time revenue, timeseries, and conversion metrics.
- Prevented memory crashes and timeouts via generator-based batch processing and in-memory set intersections.
- Developed a streaming CSV export engine with formula-injection protection and UTF-8 BOM encoding.

Full-Stack E-Commerce Platform with Real-Time Order Management

Production-Deployed Scalable Ordering & Delivery System

- Built an end-to-end e-commerce platform using ASP.NET Core Web API and React 18, applying Clean Architecture and Repository Pattern.
- Engineered a JWT-based RBAC system across multiple roles (Admin, Courier, Customer) and integrated a SignalR state machine for real-time order lifecycle tracking.
- Containerized with Docker Compose, deployed to a Linux VPS, and integrated Mikro ERP API with SMS notification services
