

GAMZE AYDIN

Computer Engineering Student

PROFESSIONAL SUMMARY

3rd-year Computer Engineering student at Ankara Medipol University with a proven track record of developing functional software solutions using **Java**, **React**, and **Node.js**. Experienced in e-commerce development and system integrations, while utilizing **Git** for version control and **Docker** for containerized environments. I am a proactive team player and a fast learner, dedicated to honing my full-stack development skills through a long-term internship in a professional setting.

EXPERIENCE

Atakum Belediyesi - Fullstack Developer Intern

June 2025 - August 2025

- Developed a React-based inventory system, contributing to both frontend and backend workflows.
- Designed stock management and reporting modules for streamlined tracking and data visualization.
- Built RESTful APIs with Node.js, ensuring seamless data integration and system reliability.
- Applied modular development and agile practices across planning, testing, and deployment.
- Collaborated under technical mentorship, utilizing code reviews and architectural feedback to optimize performance.
- Gained full-stack experience in a professional municipal IT environment using collaborative workflows.

Secure Computing - Software Test Engineer Intern

March 2025 - June 2025

- Contributed to full-stack development using React and Node.js across the entire application lifecycle.
- Developed React applications with a focus on clean component structure and efficient state management.
- Gained expertise in testing fundamentals, including unit, integration, and automated testing with Jest.
- Implemented e-commerce automation scripts simulating complex user flows like search, cart, and checkout.
- Optimized UI performance and usability through iterative refactoring and test-driven development (TDD).
- Delivered weekly technical presentations to mentors, focusing on architecture and code quality feedback.

SKILLS

Languages: Turkish (Native), English (B2)

Soft Skills: Problem Solving, Analytical Thinking, Team Collaboration, Ownership & Accountability, Time Management, Adaptability, Communication

Frontend: React, TypeScript, JavaScript, Material UI, Tailwind CSS, HTML5, CSS3, Jetpack Compose

Backend: .NET, Node.js, Express.js, RESTful API Design, Clean Architecture, JWT Authentication, RBAC Real-Time & Automation: SignalR, Socket.IO, Background Jobs, Playwright, Web Scraping

Databases & Storage: SQL Server, PostgreSQL, MongoDB, SQLite, Room

DevOps & Deployment: Docker, Docker Compose, Linux VPS Deployment, CI-Ready Scripting

EDUCATION 2022 – 2027

Ankara Medipol University | Computer Engineering

A dedicated individual with a strong foundation in Java-based software development, specializing in data structures and full-stack web technologies acquired through rigorous academic study. Currently an active member of the MedCodes Club, she consistently demonstrates a commitment to mastering modern engineering standards and best practices through collaborative teamwork and the execution of complex, practical applications.

PROJECTS For more projects see my [Website](#) / [Github](#)

Katana MRP – Luca Koza ERP Integration Platform

Full-Stack Enterprise Integration & Real-Time Synchronization System

- Engineered a bidirectional ERP synchronization engine that automates product, stock, sales order, invoice, and accounting data exchange between Katana MRP and Luca Koza, eliminating manual data entry and reducing operational errors.
- Designed a structured order lifecycle workflow (create → approve → invoice → sync) with JWT-secured role-based access control (Admin / Manager / Staff) to ensure controlled financial and operational processes.
- Implemented a real-time event-driven architecture using SignalR for instant system notifications, combined with Hangfire & Quartz.NET background jobs and Polly resilience strategies for fault-tolerant API communication.
- Built a clean architecture .NET 8 backend (45+ RESTful APIs) and a modern React 19 + TypeScript SPA, including dynamic dashboards, MUI DataGrids, and Excel export features, fully containerized with Docker.
- Developed an intelligent data integrity & deduplication engine featuring SKU validation, variant grouping, BOM synchronization, stock movement tracking, structured logging, audit trails, and automated deployment scripts.

Full-Stack E-Commerce Platform with Real-Time Order Management

Production-Deployed Scalable Ordering & Delivery System

- Production-Deployed Scalable Ordering & Delivery System
- Developed a production-ready end-to-end e-commerce platform using ASP.NET Core Web API and React.js 18, following Clean Architecture (Core/Business/Data/Infrastructure) with Repository Pattern and Dependency Injection.
- Engineered a comprehensive JWT-based Role-Based Access Control system supporting Admin, Store Attendant, Courier, Dispatcher, and Customer roles, with strict permission enforcement across both API and frontend layers.
- Implemented a real-time order state machine powered by SignalR, broadcasting instant status updates (Pending → Confirmed → Preparing → Ready → Out for Delivery → Delivered) to all relevant users.
- Designed a courier weight verification & approval workflow, enabling discrepancy detection, admin-triggered approval flows, automated pricing recalculations, and dynamic UI indicators for pending operations.
- Containerized the full stack using Docker Compose, deployed to a live Linux VPS, and integrated external services including Mikro ERP API and an SMS notification provider, supported by CI-ready deployment scripts and environment-based configuration management.

Real-Time Fashion Inventory Tracker — Automated Stock Monitoring & Instant Notification System

Headless Automation & Live Stock Alert Platform

- Built a full-stack stock tracking platform (React + Node.js/Express) that monitors real-time product availability across major Inditex brands using Playwright headless browser automation.
- Developed brand-specific scraping modules with intelligent product-type detection (clothing, shoes, accessories), dynamic size normalization, and automated cookie/banner handling for stable and accurate data extraction.
- Implemented real-time bidirectional communication with Socket.IO, enabling instant stock updates pushed to the UI without requiring page refresh.
- Integrated WhatsApp Web.js API to deliver automated mobile notifications the moment a tracked product becomes available in the user's selected size.
- Designed a scalable modular architecture supporting concurrent multi-product tracking, per-user session isolation, configurable polling intervals, and efficient resource management.
- Tech Stack: React · Node.js · Express · Playwright · Socket.IO · WhatsApp Web.js
